

*Vaisala's offering has proved a valuable resource for the wind energy application. Wind measurement is obviously very important, but many other environmental parameters are significant as well. **Page 4.***

*Urban population growth and climate and weather changes and the implications for public safety must be met by the national meteorological services in partnership with non-governmental organizations, academia and private industry. **Page 12.***

*Vaisala enables easy transition to BUFR codes in upper air soundings, and the reporting of data in high resolution. **Page 26.***

Vaisala in brief

– We develop, manufacture and market products and services for environmental and industrial measurements.

– The purpose of these measurements is to provide a basis for a better quality of life, cost savings, environmental protection, improved safety and better performance.

– We focus on market segments where we can be the world leader, the preferred supplier. We put a high priority on customer satisfaction and product leadership. We secure our competitive advantage through economies of scale and scope.
