

## Compliance to the requirements of the EU REACH Regulation

Vaisala is a downstream user of chemical substances. Vaisala does not produce any commercial chemicals. Vaisala products (articles) do not include substances that are intended to be released from articles during normal and reasonably foreseeable conditions.

We have checked the usage of chemicals in our operations. Qualities, quantities and purposes of the use of the commercial chemicals have been evaluated against the REACH Regulations. The only volume chemicals in our processes are Acetone and IPA (alcohol) which we buy from commercial chemical suppliers. We are using commercial chemicals to their nominated purposes of usage according to the operator health and safety instructions available from the commercial chemical suppliers and manufacturers.

Vaisala has evaluated its obligations against the EU REACH Regulations. The evaluation result is that Vaisala complies with the present regulations of the REACH. We follow-up the overall progress in REACH relevant to Vaisala.
